The NASA STI Program Office . . . in Profile

Since its founding, NASA has been dedicated to the advancement of aeronautics and space science. The NASA Scientific and Technical Information (STI) Program Office plays a key part in helping NASA maintain this important role.

The NASA STI Program Office is operated by Langley Research Center, the lead center for NASA's scientific and technical information. The NASA STI Program Office provides access to the NASA STI Database, the largest collection of aeronautical and space science STI in the world. The Program Office is also NASA's institutional mechanism for disseminating the results of its research and development activities. These results are published by NASA in the NASA STI Report Series, which includes the following report types:

- **TECHNICAL PUBLICATION.** Reports of completed research or a major significant phase of research that present the results of NASA programs and include extensive data or theoretical analysis. Includes compilations of significant scientific and technical data and information deemed to be of continuing reference value. NASA counterpart of peer-reviewed formal professional papers, but having less stringent limitations on manuscript length and extent of graphic presentations.
- **TECHNICAL MEMORANDUM.** Scientific and technical findings that are preliminary or of specialized interest, e.g., quick release reports, working papers, and bibliographies that contain minimal annotation. Does not contain extensive analysis.
- **CONTRACTOR REPORT.** Scientific and technical findings by NASA-sponsored contractors and grantees.

- **CONFERENCE PUBLICATION.** Collected papers from scientific and technical conferences, symposia, seminars, or other meetings sponsored or co-sponsored by NASA.
- **SPECIAL PUBLICATION.** Scientific, technical, or historical information from NASA programs, projects, and missions, often concerned with subjects having substantial public interest.
- **TECHNICAL TRANSLATION.** English-language translations of foreign scientific and technical material pertinent to NASA's mission.

Specialized services that complement the STI Program Office's diverse offerings include creating custom thesauri, building customized databases, organizing and publishing research results . . . even providing videos.

For more information about the NASA STI Program Office, see the following:

SUMMARY

Using the F-16XL as a test-bed, two strategies for improving the low-speed flying characteristics that had minimal impact on high-speed performance were evaluated. In addition to the basic F-16XL configuration several modifications to the baseline configuration were tested in the Langley 30- X 60-Foot Tunnel: 1) the notched area at the wing leading edge and fuselage juncture was removed resulting in a continuous 70° leading-edge sweep on the inboard portion of the wing; 2) an integral attached-flow leading-edge flap concept was added to the continuous leading edge; and 3) a deployable vortex flap concept was added to the continuous leading edge. The purpose of this report is simply to document the test configurations, test conditions, and data obtained in this investigation for future reference and analysis. No analysis is presented herein and the data only appears in tabulated format.

INTRODUCTION

Achieving satisfactory low-speed flying characteristics and efficient supersonic performance in one aircraft has always proved to be a challenging task. Invariably, design compromises must be made that adversely affect one of these two flight regimes and as a result there are few aircraft in the world today that can truly cruise at supersonic speeds. The F-16XL is one of these few aircraft but it too involved a compromise that limited supersonic cruise capabilities as compared to initial design goals. In order to obtain satisfactory low-speed flying characteristics modifications to both the leading and trailing edge of the wing were necessary (reference 1). These modifications resulted in increased drag at supersonic speeds and thus impacted the cruise capabilities of the aircraft. Strategies that provide both good low- and high-speed characteristics have therefore become a key ingredient in the preliminary design process of new supersonic cruise aircraft.

Using the F-16XL as a test-bed, two strategies for improving the low-speed flying characteristics that had minimal impact on high-speed performance were selected for

evaluation. Both required that several modifications be made to the basic F-16XL configuration. The modifications to the baseline configuration were: 1) the notched area at the wing leading edge and fuselage juncture was filled in resulting in a continuous 70° leading-edge sweep on the inboard portion of the wing; 2) an integral attached-flow leading-edge flap concept was added to the continuous leading edge; and 3) a deployable vortex flap concept was added to the continuous leading edge. The first modification was intended to reconfigure the F-16XL to a planform more typical of supersonic cruise configurations. The other modifications represented concepts intended to improve the low-speed flying characteristics, both performance and stability and control, of the continuous leading-edge configuration.

The purpose of this report is simply to document the test configurations, test conditions, and data obtained in this investigation for future reference and analysis. No analysis is presented herein and the data only appears in tabulated format. The data presented in this report was obtained in the Langley 30- X 60-Foot Tunnel at a Reynolds number of 2.1×10^6 based on mean aerodynamic chord.

SYMBOLS

Longitudinal forces and moments are presented in the stability-axis system, and lateral-directional forces and moments are presented in the body-axis system. The moment reference center for all tests was located at 46-percent of the mean aerodynamic chord longitudinally and at waterline 16.36 vertically.

| | |
|-------|--------------------------------------------------------------------|
| b | wing span, ft |
| C_D | drag coefficient, drag/ $q_\infty S$ |
| C_L | lift coefficient, lift/ $q_\infty S$ |
| C_l | rolling-moment coefficient, rolling moment/ $q_\infty S b$ |
| C_m | pitching-moment coefficient, pitching moment/ $q_\infty S \bar{c}$ |
| C_n | yawing-moment coefficient, yawing moment/ $q_\infty S b$ |

| | |
|----------------|-----------------------------------------------------------------------------------|
| C_Y | side-force coefficient, side force/ $q_\infty S$ |
| \bar{c} | mean aerodynamic chord, ft |
| f | frequency of oscillation, Hz |
| k | reduced-frequency parameter, $\frac{\omega b}{2V}$ or $\frac{\omega \bar{c}}{2V}$ |
| q_∞ | free-stream dynamic pressure, lb/ft ² |
| S | wing reference area, ft ² |
| V | free-stream velocity, ft/sec |
| α | angle of attack, deg |
| $\dot{\alpha}$ | rate of change of angle of attack, rad/sec |
| β | angle of sideslip, deg |
| $\dot{\beta}$ | rate of change of angle of sideslip, rad/sec |
| δ_a | aileron deflection, positive trailing edge down, deg |
| δ_e | elevon deflection, positive trailing edge down, deg |
| δ_{lef} | leading-edge flap deflection, positive leading edge down, deg |
| δ_r | rudder deflection, positive trailing edge left, deg |
| ϕ | amplitude of oscillation, deg |
| ω | angular velocity, $2\pi f$, rad/sec |

Stability derivatives:

$$C_{Aq} = \frac{\partial C_A}{\partial \frac{qc}{2V}}$$

$$C_{A\dot{\alpha}} = \frac{\partial C_A}{\partial \frac{\dot{\alpha}c}{2V}}$$

$$C_{l_p} = \frac{\partial C_l}{\partial \frac{pb}{2V}}$$

$$C_{l_r} = \frac{\partial C_l}{\partial \frac{rb}{2V}}$$

$$C_{l\dot{\beta}} = \frac{\partial C_l}{\partial \frac{\dot{\beta}b}{2V}}$$

$$C_{mq} = \frac{\partial C_m}{\partial \frac{qc}{2V}}$$

$$C_{m\dot{\alpha}} = \frac{\partial C_m}{\partial \frac{\dot{\alpha}c}{2V}}$$

$$C_{Nq} = \frac{\partial C_N}{\partial \frac{q \bar{c}}{2V}}$$

$$C_{N\dot{\alpha}} = \frac{\partial C_N}{\partial \frac{\dot{\alpha} \bar{c}}{2V}}$$

$$C_{n_p} = \frac{\partial C_n}{\partial \frac{p b}{2V}}$$

$$C_{n_r} = \frac{\partial C_n}{\partial \frac{r b}{2V}}$$

$$C_{n\dot{\beta}} = \frac{\partial C_n}{\partial \frac{\dot{\beta} b}{2V}}$$

$$C_{Y_p} = \frac{\partial C_Y}{\partial \frac{p b}{2V}}$$

$$C_{Y_r} = \frac{\partial C_Y}{\partial \frac{r b}{2V}}$$

$$C_{Y\dot{\beta}} = \frac{\partial C_Y}{\partial \frac{\dot{\beta} b}{2V}}$$

MODEL

The configuration tested was a 0.18-scale model of the F-16XL aircraft. A three-view sketch of the baseline configuration is shown in figure 1(a). The configuration consisted

of what is essentially a 70°/50° cranked-delta wing, fuselage, and vertical tail. The wing incorporated two trailing-edge control surfaces on each side, an inboard elevon for both pitch and roll control and an outboard aileron for roll control. The outboard panel also had an integral leading-edge flap. Yaw control was provided by a conventional rudder on the vertical tail. The baseline configuration was also tested with and without a noseboom, wing fences, and wingtip missiles. Three modifications to this baseline configuration were also tested and are illustrated in figures 1(b) and 1(c). The first modification simply removed the notched area at the wing leading edge and fuselage juncture. This resulted in a continuous 70° leading-edge sweep on the inboard portion of the wing. The second modification was the addition of an integral attached-flow leading-edge flap concept to the continuous leading edge. Details of the flap geometry can be found in figure 1(d). The third modification, also made to the continuous leading edge, was the addition of a deployable vortex flap concept. The vortex flap, detailed in figure 1(e), was based on a flap designed for transonic conditions (reference 2).

TESTS AND RESULTS

Two entries were made in the Langley 30- by 60-Foot Tunnel to obtain aerodynamic force and moment data for the test configuration. Figure 2(a) shows the model mounted for the static force and moment tests. Angle of attack was varied from -5° to 30° at angles of sideslip from -20° to 20° during these tests. All tests were conducted at a dynamic pressure of 6.7 lb/ft² which resulted in a Reynolds number of 2.1X10⁶ based on mean aerodynamic chord. A run log and tabulated data from the static force and moment tests are presented in tables II and III respectively. The only corrections made to the data were for flow angularity in both angle of attack and angle of sideslip.

A second entry in the Langley 30- by 60-Foot Tunnel was made to investigate the aerodynamic damping characteristics of the test configuration in all three axes. These tests utilized a small-amplitude forced oscillation technique that combines balance force and moment outputs and the known angular rate and position of the model to calculate

aerodynamic damping characteristics (reference 3). Figure 2(b) shows the model mounting used for determining pitch damping characteristics. Similar arrangements were used for the yaw and roll damping tests. These tests were also conducted at a dynamic pressure of 6.7 lb/ft² for angles of attack from -5° to 30°. All dynamic tests were made with the ailerons, elevons, and rudder undeflected. A run log and tabulated data from the dynamic force and moment tests are presented in tables IV and V respectively.

| 13. ABSTRACT (Maximum 200 words) | | | |
| <p>Using the F-16XL as a test-bed, two strategies for improving the low-speed flying characteristics that had minimal impact on high-speed performance were evaluated. In addition to the basic F-16XL configuration several modifications to the baseline configuration were tested in the Langley 30- by 60-Foot Tunnel: 1) the notched area at the wing leading edge and fuselage juncture was removed resulting in a continuous 70° leading-edge sweep on the inboard portion of the wing; 2) an integral attached-flow leading-edge flap concept was added to the continuous leading edge; and 3) a deployable vortex flap concept was added to the continuous leading edge. The purpose of this report is simply to document the test configurations, test conditions, and data obtained in this investigation for future reference and analysis. No analysis is presented herein and the data only appear in tabulated format.</p> | | | |
